                The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS) 1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothellal cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         906
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   951
agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated endidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida
                                                                                                                                                                                                                                                       120

New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)! protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of albibicans to endothelial cells. The invention is useful as vaccines for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /*tag= a

New monoclonal antibody against Candida albicans agglutinin-like sequence ladhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of the organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an

The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (seq:"ttg", aa:Tyr)

Gene probe 431.19 (AAQ62522) hybridised to all but 4 of the 87 clinical isolates of C.albicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans. A C.albicans gene library was prepared in pBR322 and inserts were selected for multiple presence in the genome, strong conservation without deletions or insertions and absolute specificity for C.abhicans Gene probe 431.19 (AAQC2552) hybridlaed to all but 4 of the 87 clinical isolates of C.abhicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQC2558-Q62594). All were found to be absolutely specific for C.albicans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       elected for multiple presence in the genome, strong conservation without deletions or insertions and absolute specificity for C.albicans. Gene probe 431.19 (AAQ62552) hybridised to all but 4 of the 87 clinical isolates of C.albicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans.                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                  A C.albicans gene library was prepared in pBR322 and inserts were selected for multiple presence in the genome, strong conservation without deletions or insertions and absolute specificity for C.albicans. Gene probe 431.19 (AAQ62522) hybridised to all but 4 of the 87 clinical isolates of C.albicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans. The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 or fragments thereof to a host to elicit anti-capon antibody production, and to a method of cryptosporidiosis treatment or prophylaxis comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 fragments are able to competitively inhibit sporozoite or merozoite attachment or invasion, and are also useful for the generation of anti-GP900 antibodies. The antibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 proteins, fragments and antibodies may therefore be used to treat or prevent cryptosporidiosis. Infection with Cryptosporidium is a common cause of diarrhoea in humans and causes life-threatening diarrhoea in immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the diagnosis of Cryptosporidium parvum infections, and for the used for the diagnosis of Cryptosporidium parvum infections, and for the detection of the parasite in the environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method of detecting Cryptosporidium in biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum coding sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          933 TGCTACAACTAGAACAGTTACAGACAGTACCACTGCTGTCACTACTTTACCATTCAATCC

US-09-248-796A-16243

Sequence 16243, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

FAPLICATH: Weith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICY

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 10796.132

CURRENT FILING DATE: 1999-02-13

FRIOR FILING DATE: 1999-02-13

FRIOR FILING DATE: 1998-02-13

FRIOR FILING DATE: 1998-08-13

Patent No. 6747137
GENERAL INFORMATION:
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPBUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPBUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-13
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR PILING DATE: 1998-02-13
PRIOR APPLICATION NUMBER: US 60/096,409
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 14125
LENGTH: 511
                                                                                                                                                                                                                                                                                                                                              1020
                                                                                                                                                                                                                                                                                                                                                                                   1140

Sequence 16245, Application US/09248796A

Sequence 16245, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: KEATH Weinstock et al

APPLICANT: KEATH WEINSTON: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT PELLING DATE: 1999-02-12

PRIOR PELLING DATE: 1999-02-12

PRIOR PELLING DATE: 1998-02-13

PRIOR PILING DATE: 1998-02-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 16245

LENGTH: 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRATURE:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT PILING DATE: 1999-02-12
PRIOR FILING DATE: 1999-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 14123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GATAAAACCAAAACAATCGAAATTTTGCAACCTATTCCAACCTACCATCACAACTTCA 1059
